3D printing has the potential to create a whole new powerful product category. Industries such as fashion, aerospace, medicine and food have already been showing signs of disruption with the...

Is 3D Printing The Next Industrial Revolution? - TechCrunch

IDTechEx's new report, "3D Printing and Additive Manufacturing 2020-2030: COVID Edition", answers that and related questions, and takes a look into the next decade for 3D printing technologies. For, while Covid has clearly had a huge effect on industry, there remains every reason to forecast a brighter future.

What does the future hold for 3D Printing? - Medical ...

The 3D Printing Revolution is about to transform our lives. While traditional laser and inkjet printers only make marks on paper, 3D printers build up solid objects in a great many very thin layers. Already pioneers are 3D printing production tools, prototypes, jewelry, sunglasses, works of art, toys and vehicle parts. But this is just the beginning, with digital manufacturing destined to change how we create, transport and store a great many things.

3D Printing: The Next Industrial Revolution

As 3D printing continues to make inroads from product design right through to the manufacturing floor, Dr Phil Reeves offers an insight into where the technology is making the biggest impact in the next industrial revolution. Dr Phil Reeves, VP Strategic Consulting, Stratasys.

Where does 3D printing lie within Industry 4.0? - The ...

Popular media has predicted that we will be using domestic 3D printers to make consumer goods, fundamentally restructuring global production supply chains and ending traditional manufacturing as we know it. Meanwhile the 3D printing industry has been evolving and developing the business models that underpin the use of additive manufacturing methods.
