Applications of Fluid Mechanics in Refrigerators and

Air Conditioners: The fluids used in refrigerators and

air-conditioners are known as refrigerants. The

refrigerant absorbs the heat from evaporator, which is

at a low temperature and distributes that heat to the

atmosphere, which is at a high temperature. In air

conditioners, the refrigerant absorbs room heat and

throws it in to the atmosphere keeping the room cool.

Fluid mechanics is the branch of physics which involves

the study of fluids (liquids, gases, and plasmas) and the

forces on them. Fluid mechanics can be divided into

fluid statics, the study of fluids at rest; and fluid

dynamics, the study of the effect of forces on fluid

motion. It is a branch of continuum mechanics, a subject

which models matter without using the information that

Fluid Mechanics - an overview | ScienceDirect Topics
Fluid mechanics provides the theoretical foundation for hydraulics, which focuses on the engineering uses of fluid properties. In fluid power, hydraulics are used for the generation, control, and transmission of power by the use of pressurized liquids.

Though applications of Bernoulli's principle are among the most dramatic examples of fluid mechanics in operation, the everyday world is filled with instances of other ideas at work. Pascal's principle, for instance, can be seen in the operation of any number of machines that represent variations on the idea of a hydraulic press.

Archimedes ' Principle
Archimedes ' Principle states that " when a body is wholly or partially immersed in a fluid, it is acted upon by an upthrust which is equal to the weight of the fluid displaced. This upthrust, or buoyancy, act through the centre of mass of the displaced fluid.

Hydraulics, branch of science concerned with the practical applications of fluids, primarily liquids, in motion. It is related to fluid mechanics (q.v.), which in large part provides its theoretical foundation.

Hydraulics deals with such matters as the flow of liquids in pipes, rivers, and channels and their confinement by dams and tanks.
