Learners gain an understanding of the basic principles of biology through a mix of [...]

This book presents an international perspective on health education and specifically the influence that context has on this aspect of education. The focus includes both formal and non-formal health education and the factors that impact upon its effectiveness, particularly in non-Western and non-English-speaking contexts (i.e., outside the UK, USA, Australia, NZ, etc.). An important feature of the book is that it draws upon the experiences and research of local experts, representing the perspectives of an extremely diverse cohort across the world (22 countries and 2 regions in total). The book addresses topics such as: the development and implementation of health education in different countries; the influence of political, cultural, societal or religious mores; governmental or ministerial drives; economic or other pressures driving curriculum reform; and the influence of external assessment regimes on health education. By embedding discussions of health education in local contexts and representing a diversity of perspectives on this important topic this book highlights both barriers and enablers to improving health education across the globe.

This edited volume focuses on how international education policy, set by international policymakers and donors, influences local education policy in developing countries. The book's primary purpose is to give voice to scholars from developing countries and regions around the world by inviting them to explore how the international policy, invariably linked to international aid, influences education policy formation and implementation in their country or region and how this influence does or does not meet the local cultural, social, economic, and political needs. A relatively recent and small body of research and commentary supports a discourse that questions how well international education policy mandates such as Education For All serve the needs of developing countries. The intent of this book is to advance this discourse by giving voice to local scholars who observe and study the donor process. The book will be divided into two sections: the first section will set the stage for the discussions in the second section by providing theoretical and historical context for international education policy. As a framework for understanding, the book adopts the position that international policy does not have either the ability or the intent to serve the widely diverse needs of development around the world. International education policy has been formed, historically, by wealthy nations and agencies dominated by Western theoretical paradigms. In recent years, donor countries have made an effort to collaborate with developing countries in developing international education policy goals; however, this collaboration has been limited. Following establishment of the context of international education policy, section II of the book provides a forum for scholars from around the world to openly discuss and critique the impact of international policy on education in their country or region.

The ECIS International Schools Directory 2009/10' contains up-to-date facts on more than 800 schools worldwide and comprehensive details of over 570 of them which are ECIS members.

This encyclopedia is the most current and exhaustive reference available on international education. It provides thorough, up-to-date coverage of key topics, concepts, and issues, as well as in-depth studies of approximately 180 national educational systems throughout the world. Articles examine education broadly and at all levels—from primary grades through higher education, formal to informal education, country studies to global organizations.

The Routledge International Companion to Education addresses the key issues underpinning the rethinking and restructuring of education at the beginning of the new millennium. The volume contains over fifty major contributions exploring a wide range of issues, including: * philosophy of education * the economics and resourcing of education * testing and assessment; current issues and future prospects * standards * multiculturalism * anti-racism * computers in classrooms * mother tongue education * civics and moral education. Each chapter gives a contemporary account of developments in the field, and looks to the future and the directions that new activity and inquiry are likely to take. All the chapters are written from an international perspective.

Peterson's Private Secondary Schools: Traditional Day and Boarding Schools is everything parents need to find the right day or boarding private secondary school for their child. Readers will find hundreds of school profiles plus links to informative two-page in-depth descriptions written by some of the schools. Helpful information includes the school's area of specialization, setting, affiliation, accreditation, subjects offered, special academic programs, tuition, financial aid, student profile, faculty, academic programs, student life, admission information, contacts, and much more.

In an era of globalization and urbanization, various social, economic, and environmental challenges surround advances in modern biological sciences. Considering how biological knowledge and practice are intrinsically related to building a sustainable relationship between nature and human society, the roles of biology education need to be rethought to respond to issues and changes to life in this biocentury. This book is a compilation of selected papers from the Twenty Third Biennial Conference of the Asian Association for Biology Education 2010. The title, Biology Education for Social and Sustainable Development, demonstrates how rethinking and reconstruction of biology education in the Asia-Pacific region are increasingly grounded in deep understandings of what counts as valuable local knowledge, practices, culture, and ideologies for national and global issues, and education for sustainable development. The 42 papers by eminent science educators from Australia, China, Philippines, Singapore, Taiwan, and the U.S., represent a diversity of views, understandings, and practices in biology education for sustainable development from school to university in diverse education systems and social-cultural settings in the Asia-Pacific region and beyond. The book is an invaluable resource and essential reference for researchers and educators on Asian perspectives and practices on biology education for social and sustainable development.
