Black non-Latino people made up 52% of all coronavirus cases in the city, and adjusted for population, this group was more than twice as likely to be infected as white non-Latino people.

Why black Americans are at higher risk for coronavirus - CNN

COVID-19 hospitalization rates among non-Hispanic Black people and Hispanic or Latino people were both about 4.7 times the rate of non-Hispanic white people. While there's no evidence that people of color have genetic or other biological factors that make them more likely to be affected by COVID-19 , they are more likely to have underlying health conditions.

Coronavirus patents from black and ethnic minority backgrounds may be at higher risk of suffering deadly complications of the disease, an NHS report suggests. Despite making up just 13 per cent of...

Coronavirus UK: NHS study suggests race may affect risk...

With its emphasis on the lived experiences of African Americans, Black Corona provides a fresh and innovative contribution to the study of the dynamic interplay of race, class, and space in contemporary urban communities. It questions the accuracy of the widely used trope of the dysfunctional “black ghetto,” which, the author asserts, has often been deployed to depoliticize issues of racial and economic inequality in the United States.
