~~Body systems - Science Learning Hub~~

Human Body This resource, aimed at primary learners, contains three lessons on skeleton and muscles, digestion and circulation. An interactive simulation, 'Inside the Human Body', explores each of the systems demonstrating their structure and function. It also provides interactive games which support the activities.

~~Human Body | STEM~~

When the muscles start to work, they need more oxygen so the respiratory system responds by getting more oxygen into the lungs. The blood carries greater amounts of oxygen and the heart responds to...

~~Short term effects of exercise on the body systems - Long ...~~

Your muscular system consists of the muscles attached to your skeleton, the muscles found in your digestive tract and arteries, and the heart muscles. Calcium, magnesium, potassium and sodium are required for your muscles to be able to move and contract, while vitamin B1 is important for healthy heart function.

~~Body Systems & Nutrition | Healthfully~~

Skeletal muscle is the type of muscle that we can see and feel. When a body builder works out to increase muscle mass, skeletal muscle is what is being exercised. Skeletal muscles attach to the skeleton and come in pairs -- one muscle to move the bone in one direction and another to move it back the other way.

~~How Muscles Work | HowStuffWorks~~

Muscles are how we move and live. All movement in the body is controlled by muscles. Some muscles work without us thinking, like our heart beating, while other muscles are controlled by our thoughts and allow us to do stuff and move around. All of our muscles together make up the body's muscular system.

~~Biology for Kids: Muscular System~~

The muscular system is responsible for the movement of the human body. Attached to the bones of the skeletal system are about 700 named muscles that make up roughly half of a person's body weight. Each of these muscles is a discrete organ constructed of skeletal muscle tissue, blood vessels, tendons, and nerves.
