When writing Bolted Joint Engineering – Fundamentals and Applications, I used the conventional view of the slip phenomenon, explaining the slip of fastened objects on the contact surface – so-called ‘ macro-slip ’ . You can observe this with your eye, as this type of slip needs to be only 0.1 mm for visual confirmation.

Abstract. There are several types of joints that are used to connect structural parts. The most common kinds are threaded fasteners (bolts and screws) and riveted joints. These joints are primarily used to provide continuity of structure and transfer of internal load from one member to another. Welded joints and their applications in space structures, specifically pressurized tanks, were discussed in chapter 6.
