Cerebrovascular disease: Causes, symptoms, and treatment

What is Cerebro Vascular Disease? The word cerebrovascular is made up of two parts - "cerebro" which refers to the large part of the brain, and "vascular" which means arteries and veins. Together, the word cerebrovascular refers to blood flow in the brain. Cerebrovascular disease (CVD) refers to any abnormality in the brain caused by problems with the blood vessels.

NHSGCC : What is Cerebro Vascular Disease?

Most cerebrovascular disease can be at least partially improved by lowering cholesterol, controlling blood pressure and diabetes and quitting smoking. this may require prescription medications or lifestyle changes, such as exercise and healthy eating, but the benefit of preventing a stroke is well worth it.

What You Should Know About Cerebrovascular Disease

Cerebrovascular diseases are conditions caused by problems that affect the blood supply to the brain. Types of cerebrovascular disease There are a number of different types of cerebrovascular disease. The four most common types are:

NHS 111 Wales - Encyclopaedia : Cerebrovascular disease

Cerebrovascular disease is not only one disease. Instead, it's a group of diseases, disorders, and conditions that affect your blood vessels and blood supply to the brain, including stroke, vascular malformation, aneurysm, and transient ischemic attack (TIA).

Cerebrovascular Disease: Causes, Symptoms & Support Strategies

Cerebrovascular disease includes a variety of medical conditions that affect the blood vessels of the brain and the cerebral circulation. Arteries supplying oxygen and nutrients to the brain are often damaged or deformed in these disorders. The most common presentation of cerebrovascular disease is an ischemic stroke or mini-stroke and sometimes a hemorrhagic stroke. Hypertension is the most important contributing risk factor for stroke and cerebrovascular diseases as it can change the structure
