In Chapter II we will investigate variational problems on the 2-dimensional torus. We will look at the corresponding global minimals as well as at the relation be tween minimals and extremal fields. In this way, we will be led to Mather sets. Finally, in Chapter III, we will learn the connection with monotone twist maps.

While it is helpful and pivotal to know Riemann sums (it helps how to set up integrals both in one and higher dimensions), there is a point in any course, where solving things directly is more convenient. Mathematics is about elegance. The most simple solution wins. Every math problem should be an advertisement, how powerful it is.
