Circuit modeling can be used to simulate the electromagnetic coupling mechanism of each critical link, allowing its performance to be analyzed and compared with the formal requirements. Bench testing during the development of any product will allow any interference problem to be identified and corrected, long before the manufactured unit is subjected to formal testing.

Circuit Modeling for Electromagnetic Compatibility

This book * defines the relationship between electromagnetic theory and circuit theory which enables circuit models to simulate the coupling of interference, * describes a method of assigning component values to cables of any cross section, * defines

Partial element equivalent circuit method is partial inductance calculation used for interconnect problems from early 1970s which is used for numerical modeling of electromagnetic properties. The transition from a design tool to the full wave method involves the capacitance representation, the inclusion of time retardation and the dielectric formulation. Using the PEEC method, the problem will be transferred from the electromagnetic domain to the circuit domain where conventional SPICE-like circ
