"Aimed at software developers who previously had little or nothing to do with programming apps or who had worked with other tools and frameworks and would like to build cool apps in an easy way. The book spans from the idea of the popular app framework and its installation to the realization of a complete app including its publication on Apple App Store, Google Play, for Desktop by using Electron or as Progressive Web App (PWA). Each of the twelve chapters is dedicated to its own aspect of Ionic. In the process, new functionalities are gradually being added to an initially simply designed tourism app called 'BoB Tours.' At the end of this book, the reader not only knows the key features of Ionic, but has also understood how the whole works in context. He finally has the necessary knowledge to be able to develop his own awesome apps with Ionic"--Back cover.

The protection which is installed on an industrial power system is likely to be subjected to more difficult conditions than the protection on any other kind of power system. Starting with the many simple devices which are employed and covering the whole area of industrial power system protection, this book aims to help achieve a thorough understanding of the protection necessary. Vital aspects such as the modern cartridge fuse, types of relays, and the role of the current transformer are covered and the widely used inverse definite-minimum time overcurrent relay, the theory of the Merz-Price protection system and the development of the high-impedance relay system are critically examined. This new edition has come about in response to the dramatic change from the use of electro-magnetic relays to electronic and micro-processor relays which figure in practically all new installations. Therefore, although the theory and usage are the same, the application can be much improved owing to the increased range and accuracy and the added facilities provided with the modern relays. This book reflects the change and explains the technical advantages.

The author of City of Bits and e-topia finishes his trilogy with a survey of the "cybernetic" consequences of Internet and wireless technology, exploring the ways in which modern technology is extending the human body and mind. (Technology)
