**Contractual Procedures in the Construction Industry 7th edition aims to provide students with a comprehensive understanding of the subject, and reinforces the changes that are taking place within the construction industry. The book looks at contract law within the context of construction contracts, it examines the different procurement routes that have evolved over time and the particular aspects relating to design and construction, lean methods of construction and the advantages and disadvantages of PFU/PPP and its variants. It covers the development of partnering, supply chain management, design and build and the way that the clients and professions have adapted to change in the procurement of buildings and engineering projects. This book is an indispensable companion for students taking undergraduate courses in Building and Surveying, Quantity Surveying, Construction Management and Project Management. It is also suitable for students on HND/C courses in Building and Construction Management as well as foundation degree courses in Building and Construction Management. Key features of the new edition include: A revised chapter covering the concept of value for money in line with the greater emphasis on added value throughout the industry today. A new chapter covering developments in information technology applications (building information modelling, blockchains, data analytics, smart contracts and others) and construction procurement. Deeper coverage of the strategies that need to be considered in respect of contract selection. Improved discussion of sustainability and the increasing importance of resilience in the built environment. Concise descriptions of some of the more important construction case laws.**

This fifth edition of Contractual Procedures in the Construction Industry introduces a number of new chapters that reflect the changes in procurement, including health and safety management, partnering the supply chain, sustainability and Constructing Excellence in the Built Environment. It aims to provide the student with a comprehensive understanding of the subject and reinforces the changes that are taking place within the construction industry, such as how it is organised and the way in which consultants, contractors, subcontractors and all of those involved in the supply chain obtain work. Key Features - Four new chapters: Health and safety management, partnering the supply chain, sustainability and Constructing Excellence in the Built Environment. - Existing chapters have been updated to include present legislation. - New case studies, and a special section on legal cases. - New appendices. This new edition is suitable for students taking undergraduate courses in Building and Surveying, Quantity Surveying, Construction Management, and Estate Management. It is also suitable for students on HND/C courses in Building, and Construction Management and foundation degree courses in Building and Construction Management. Allan Ashworth is currently a visiting professor in the School of Construction and Property Management at the University of Salford and the Adjunct Professor of Quantity Surveying at UNITEC in New Zealand. He is also a senior academic advisor to the Centre for Education in the Built Environment (CEBE), based at the universities of Cardiff and Salford. He is a former HMI (Her Majesty's Inspector) in the Department for Education and Employment.

Contractual Procedures in the Construction Industry aims to provide students with a comprehensive understanding of the subject and reinforces the changes that are taking place within the construction industry, such as how it is organised and the way in which consultants, contractors, subcontractors and all of those involved in the supply chain obtain work. This book, now in its sixth edition, is an indispensable companion for students taking undergraduate courses in Building and Surveying, Quantity Surveying, Construction Management, and Project Management. It is also suitable for students on HND/C courses in Building and Construction Management as well as foundation degree courses in Building and Construction Management. New content includes: A new chapter has been added on Public Private Partnerships (PPP) and the Private Finance Initiative. A revised section of the book now deals with generic principles about the conditions of contracts, which can be applied to all forms of contract.

Civil Engineering Contractual Procedures gives an introduction to the contractual procedures, legislation and administrative practices that are used in the civil engineering industry. It introduces the principles of contract law, and the main forms of contract used in the construction industry. It then concentrates on the main forms of contract used in civil engineering, with the discussion based on the ICE Conditions of Contract. It looks at the obligations of the various parties to the contract under all the clauses of the contract. Civil Engineering Contractual Procedures provides a sound basis for anyone seeking an understanding of the contractual administration of civil engineering projects. It is an essential core text for all students of civil engineering and related courses at both undergraduate and higher technician levels. It will also be a useful reference source for those already working in the industry.

Many large construction projects, such as those in the Middle East or Asia Pacific, are international in scope with a range of contractors and subcontractors signing contracts for delivery of specified work or services. The contractual situation in these instances may be complex and potentially includes a range of standard and bespoke contractual arrangements. In addition, the parties to these contracts may be based in different parts of the world, and are often working to different legal systems and understandings. This can lead to confusion in the understanding, interpretation and execution of a given contract. International Construction Contracts provides concise and practical guidance to those involved in the negotiation and management of international construction and engineering contracts. It sets out in clear, straightforward language the main features of construction contracts and international dispute resolution procedures. It ensures the reader is aware of the issues that might arise on the contractual side of their project so that they may better protect their party's interests. Many of the features and points discussed are illustrated by reference to the popular FIDIC contracts and the book includes a commentary on the two most widely used FIDIC design-build forms, the Yellow and Silver Books. Also included in the book is a fully worked example of a typical ICC arbitration from start to finish, with "pleadings", a detailed case narrative and commentary on events, and an example arbitration award. The ICC and SIAC arbitration rules are also provided. Written for construction professionals, the book will be of great interest to engineers, architects, project managers, quantity surveyors, contract managers and contract administrators working on international projects.

This book provides a systematic appraisal of the planning procedures and management decisions undertaken during the pre-tender, pre-contract and contract planning stages of a construction project. The coverage and treatment is especially suited to students preparing for the final examinations of the CIOB and the IQS. Planning engineers, site managers and contracts managers will also find much of direct relevance and interest in the book.

This intentionally conducted study of the latest construction industry practices addresses a broad range of Information and Communication Technology applications. Drawing on research conducted in the US and UK, this book presents the state of the art of various ebusiness processes, and examines BIM, virtual environments and mobile technologies. Innovation is a theme that runs throughout this book, so in addition to the direct impact of these new technical achievements, it also considers the management styles that helped them to emerge. Examples from industry are illustrated with case studies and presented alongside research from some of the best known academics in this field. This book is essential reading for all advanced students and researchers interested in how ICT is changing construction management and the construction industry.

In this superb new volume, Edward Whitticks has charted the course for anyone working with contracts and dispute control in oil and gas, one of the most volatile industries in the world. His practical, straightforward approach will move you step by step through the process of contractual negotiations, bids and closeouts. For anyone working in the oil and gas industry today, finding your way through the maze of contract management seems more cutthroat and challenging than ever before. In Construction Contracts, Edward Whitticks dispels the myth that "there has to be a winner and a loser in contractual management and dispute control. As a desktop companion for project managers and engineers, contract administrators, cost scheduling engineers and others engaged in the field of refinery, pipeline and petrochemical construction, this book covers the entire contract process.
