Our study confirmed WNV infection in farmed crocodiles in Africa. Clinical signs and pathological changes in multiple organs correlated with those de - scribed for WNV infection in farmed American alligators in the United States (4). The source of the WNV in the outbreak remains unresolved. WNV might have been circulating on the farm because the

Clinical Signs. Poxvirus infection in crocodiles is associated with high morbidity, but low mortality. Affected animals develop skin lesions characterized by round grayish-white to brown lesions and either superficial or depressed foci that can coalesce to form large lesions.

~~Nile Crocodile — an overview | ScienceDirect Topics~~

The most frequently identified serovars were Typhimurium (seven), Tsevie (six), Duval (six), Schwerin (six), Tinda (six), and Tallahassee (six). On two commercial crocodile breeding farms that had experienced ongoing problems for about two years, many isolates of Salmonella were made.

~~Salmonella isolated from crocodiles and other reptiles ...~~

Extremely poor growth of some individuals within a birth cohort (runting) is a significant problem in crocodile farming. We conducted a pathological investigation to determine if infectious disease is associated with runting in farmed saltwater crocodiles (*Crocodylus porosus*) and to look for evidence of other etiologies. In each of 2005 and 2007, 10 normal and 10 runt crocodiles, with an average age of 5.5 months and reared under identical conditions, were sampled.
