Flex is a free and open-source software alternative to lex. It is a computer program that generates lexical analyzers. It is frequently used as the lex implementation together with Berkeley Yacc parser generator on BSD-derived operating systems, or together with GNU bison in *BSD ports and in Linux distributions. Unlike Bison, flex is not part of the GNU Project and is not released under the GNU General Public License, although a manual for Flex was produced and published by the Free Software Fo

Generator Charles Donnelly and Richard Stallman. Bison is a general-purpose parser generator that converts a grammar description for an LALR(1) context-free grammar into a C program to parse that grammar.

The LEX & YACC Page

The flex program reads the given input files, or its standard input if no file names are given, for a description of a scanner to generate. The description is in the form of pairs of regular expressions and C code, called rules. flex generates as output a C source file, 'lex.yy.c' by default, which defines a

`routinelyylex()`.

Lexical Analysis with Flex

Go to the previous, next section.. Input and Output Files. flex's actions are specified by definitions (which may include embedded C code) in one or more input files. The primary output file is ``lex.yy.c'`. You can also use some of the command-line options to get diagnostic output (see section Command-line Options). This chapter gives the details of how to structure your input to define the ...
