In the middle of the 20th century, Erik Erikson proposed a stage theory of psychosocial development. The theory outlines eight stages that take place throughout the human life span. The fifth stage, which takes place during adolescence, is a period of identity exploration and development.

Emerging Adulthood: Defining the Developmental Stage

The prevalence of substance use disorders is highest during adolescence; however, many adolescents experience a natural resolution of their substance use by early adulthood, without any formal intervention. Something appears to be unique and adaptive about the adolescent brain. In this Review, we examine the roles of the social environment and neurocognitive development in adolescents' natural ...
