Detailed case studies include texts by William Shakespeare, S.T. Coleridge, Mary Shelley, Bram Stoker, Oscar Wilde, Joseph Conrad, Don DeLillo, and Ian McEwan.

Definition is an important scientific and philosophical method. In all kinds of scientific and philosophical inquiries definition is provided to make clear the characteristics of the things under investigation. Definition in this sense, sometimes called real definition, should state the essence of the thing defined, according to Aristotle. In another (currently popular) sense, sometimes called nominal definition, definition explicates the meaning of a term already in use in an ordinary language or the

"Martian Metamorphoses: The Planet Mars in Ancient Myth and Religion," written by Ev Cochrane and published by Aeon Publishing in Ames, Iowa. Provides a summary and a table of contents.

Ever since early stargazers discovered that some heavenly bodies wandered among the others, people have been fascinated by the planets. Kepler calculated their orbits from naked-eye observations; Galileo's telescope made it possible to discern their markings; now observations from spacecraft provide electronically enhanced images that bring these distant worlds even closer. In *Worlds in the Sky*, William Sheehan gives us a history of this long fascination, weaving together scientific history, anecdotes surrounding planetary discoveries, and the personal reflections of an incurable amateur astronomer. He describes how we arrived at our current understanding of the Moon and
