View more > Recent research has identified the value of distinguishing between employee's appraisals of their work-based challenge, hindrance, and threat job demands, and of how employee's future-oriented coping is associated with key occupational outcomes. The current study extends this research by assessing the extent to which employee's proactive and preventive coping techniques each directly and indirectly predicted challenge, hindrance, and threat appraisals.

Seeing into the future: The role of future-oriented coping

People with positive coping skills are described as using "more mature, flexible, purposive, future-oriented, reality-based, and metered approaches to combating stressful and anxiety-provoking situations, whereas those with negative coping skills are viewed as rigid, past-propelled, reality-distorting, and lack real time adaptive processes" (Liveneh et al., 1996, p. 503).
