energy-rich molecules which organisms use to carry out daily activities. As organisms consume other plants or animals, energy is transferred from one organism to another.

## Skills Worksheet Active Reading

Energy, Energy Copyright © Houghton Mifflin Harcourt Publishing Company What happens to energy during chemical reactions? • Chemical reactions can either release energy or absorb energy. • A chemical reaction that requires an input of energy is called an endothermic reaction. The energy is absorbed from the surroundings, usually as heat.

- A Chemical Change is the process by which a substance changes into entirely new substances.
- Not the same as chemical properties
- For example: •BURNING = CHEMICAL change
- FLAMMABILITY = chemical property
- Chemical changes are often influenced by temperature.
- Higher temperatures often mean faster chemical reactions.
