This unique text and video set presents a thorough introduction to Autodesk Inventor for anyone with little or no prior experience with CAD software. It can be used in virtually any setting from four year engineering schools to on-the-job use or self-study. Unlike other books of its kind, it begins at a very basic level and ends at a very advanced level. It ' s perfect for anyone interested in learning Autodesk Inventor quickly and effectively using a “ learning by doing ” approach. Additionally, the extensive videos that are included with this book make it easier than ever to learn Inventor by clearly demonstrating how to use its tools.

The philosophy behind this book is that learning computer aided design programs is best accomplished by emphasizing the application of the tools. Students also seem to learn more quickly and retain information and skills better if they are actually creating something with the software program. The driving force behind this book is “learning by doing.” The instructional format of this book centers on making sure that students learn by doing and that students can learn from this book on their own. In fact, this is one thing that differentiates this book from others: the emphasis on being able to use the book for self-study. The presentation of Autodesk Inventor is structured so that no previous knowledge of any CAD program is

required. This book uses the philosophy that Inventor is mastered best by concentrating on applying the program to create different types of solid models, starting simply and then using the power of the program to progressively create more complex solid models. The Drawing Activities at the end of each chapter are more complex iterations of the part developed by each chapter ' s objectives. Since CAD programs are highly visual, there are graphical illustrations showing how to use the program. This reinforces the “ learn by doing ” philosophy since a student can see exactly what the program shows, and then step through progressive commands to implement the required operations. Rather than using a verbal

you make the process of creativity and problem-solving logical, systematic and rational, thus increasing the efficiency of your thinking. Unlike other books that talk about innovation, our Manual tells you what to do and how to do it in order to achieve the best result faster. Unlike other books on innovation it is ... thin and manageable. It is a lesson with visual appeal, making use of pictures, diagrams and striking examples. This manual can also be helpful for professional troubleshooters due to its “ tick-box ” and procedure-like style. The algorithms of the Inventor's Manual are based on a Theory of Inventive Problem Solving (known by its Russian acronym TRIZ), which is a highly adaptable and overarching methodology. But you do not need to

The Inventor's Manual does not repeat material that is already published, it presents the essence of the inventive thinking process. The following features make the Inventor's Manual unique:

- Step-by-step problem diagnostics and templates for defining the Ideal Final Result which you will not find in any book on TRIZ
- Templates for thorough reflection on the context of a product design that are not explicitly presented in TRIZ at all, but which are a very important system thinking aid especially if you are dealing with complex engineering

You will not find this in any book published on TRIZ • You will find the influence of natural rules for dealing with resources, complexities and ways to avoid problems that are not present in ordinary TRIZ methods. first copyrighted in 1889, and now revised by A. A. Hopkins, a member of the American Statistical Association. The book is intended as a guide for inventors in perfecting their inventions, taking out their patents, and disposing of them to the best advantage. The first 78 pages include a discussion of the kinds of patents that are profitable, information on drawing up the patent, and an explanation of the necessity of consulting the right kind of lawyer. The correct procedure in the development of the invention is pointed out, sample forms for assigning an interest in the patent are given, and the relations of the inventor and promoter are explained. A number of pages are devoted to design patents and registration of prints and

labels. The numerous pitfalls set by unscrupulous attorneys are quite thoroughly discussed. This information as well as that on the marketing of the patent is of special value to the inexperienced inventor. The remaining pages are devoted to the census of 1910 arranged according to occupations, also a census of the larger cities and of states by counties. Six reproductions of patent office drawings are included.
