Rivelazione shock! Qual è la vera causa delle nostre malattie? L'alimentazione è l'argomento più discusso del momento. Al giorno d'oggi le intolleranze alimentari sono uno dei disturbi più frequenti e rappresentano il fattore principale di rischio per numerose malattie croniche. Secondo l'OMS (Organizzazione Mondiale della Sanità) un terzo delle malattie cardiovascolari e dei tumori possono essere evitati grazie a una corretta alimentazione. Quale dieta seguire per stare bene in salute? Di questo argomento si parla nel libro "La pillola magica. Saggio democratico", un testo scritto con un linguaggio comprensibile a tutti, che propone un'ipotesi inaspettata e invita a una discussione aperta sia alle persone comuni sia agli scienziati. La rivelazione che cambierà il paradigma della nostra alimentazione. La salute e la longevità saranno una realtà nel futuro dell'umanità se...

The emergence of cinema as a predominant form of mass entertainment in the 1910s inspired intellectuals to rethink their definitions of art. The Great Black Spider on Its Knock-Kneed Tripod traces the encounter of Italy's writers with cinema, and in doing so offers vibrant new perspectives on the country's early twentieth-century culture. This comparative study focuses on the immediate responses to this cultural phenomenon of three highly influential intellectuals, each with a competing aesthetic vision - Filippo Tommaso Marinetti, founder of Futurism; Gabriele D'Annunzio, leader of Italian Decadentism; and Luigi Pirandello, a father of modern European theatre and theorist of humour. Along with demonstrating how the popularization of the feature-length narrative influenced each author's outlook and theories, Michael Syrimis unravels the extent to which cinema enforced or neutralized the ideological and aesthetic differences between them.

Argues that technology is changing the way we understand human society and discusses how the disciplines of politics, culture, public debate, morality, and humanism will be affected when responsibility for them is delegated to technology.

The period from the late fourth to the late second century B. C. witnessed, in Greek-speaking countries, an explosion of objective knowledge about the external world. While Greek culture had reached great heights in art, literature and philosophy already in the earlier classical era, it is in the so-called Hellenistic period that we see for the first time - anywhere in the world - the appearance of science as we understand it now: not an accumulation of facts or philosophically based speculations, but an organized effort to model nature and apply such models, or scientific theories in a sense we will make precise, to the solution of practical problems and to a growing understanding of nature. We owe this new approach to scientists such as Archimedes, Euclid, Eratosthenes and many others less familiar today but no less remarkable. Yet, not long after this golden period, much of this extraordinary dev-

opment had been reversed. Rome borrowed what it was capable of from the Greeks and kept it for a little while yet, but created very little science of its own. Europe was soon smothered in the obscurantism and stasis that blocked most avenues of intellectual development for a thousand years – until, as is well known, the rediscovery of ancient culture in its fullness paved the way to the modern age.

When the novel *Brave New World* first appeared in 1932, its shocking analysis of a scientific dictatorship seemed a projection into the remote future. Here, in one of the most important and fascinating books of his career, Aldous Huxley uses his tremendous knowledge of human relations to compare the modern-day world with his prophetic fantasy. He scrutinizes threats to humanity, such as overpopulation, propaganda, and chemical persuasion, and explains why we have found it virtually impossible to avoid them. *Brave New World Revisited* is a trenchant plea that humankind should educate itself for freedom before it is too late.

"Naven" is the name of a peculiar ritual practiced by Iatmul, a head-hunting tribe of New Guinea. The ceremony is performed to congratulate members of the tribe upon the completion of notable accomplishments, among which homicide ranks highest. Ordinarily this tribe insists upon an extreme contrast between the sexes, but in the "naven" ceremony, transvestitism and ritual homosexuality are represented. The "naven" serves in this book as a motive around which the author has constructed one of the most influential works of field anthropology ever written.

This text is suitable for those who intend to learn or deepen their knowledge about SQL. The SQL language concerns the programming of the databases, with that language we can create, modify, manage all that concerns a Database. It is a universal language in the sense that most of its instructions can also be inserted into a programming language that is not SQL, but C Sharp, VB, and so on to manipulate databases directly from a program that is being developed. In this text we will find most of the commands and then SQL statements, then still functions, or how to create VIEWS, STORED PROCEDURES, and so on. All this is explained by simple examples, avoiding encountering long and complex

In 1978 Sontag wrote *Illness As Metaphor*. A cancer patient herself at the time, she shows how the metaphors and myths surrounding certain illnesses, especially cancer, add greatly to the suffering of the patients and often inhibit them from seeking proper treatment. By demystifying the fantasies surrounding cancer, Sontag shows cancer for what it is - just a disease. Cancer is not a curse, not a punishment, certainly not an embarrassment, and highly curable, if good treatment is found early enough. Almost a decade later, with the outbreak of a new, stigmatised disease replete with mystifications and punitive metaphors, Sontag wrote *Aids and its Metaphors*, extending the argument of the earlier book to the AIDS pandemic.
