L7: Divide with Fractions 59 Part 1: Introduction Lesson 7  
Find Out More When you found the number of 2  $\cdot$  3 s that are in 4, you were dividing. You are solving the problem  $4 \div 2 = 2$ . You can solve this problem by multiplying. You know that multiplication and division are related. 4 divided by 2 is the same as 1  $\cdot$  2 of 4, or multiplying 4 by 1  $\cdot$  2.

and division to divide fractions by fractions.

Lesson 7: Divide with Fractions - Ready Common Core  
Essentially, division asks “ how many ” . It ’ s important to verbalize that no matter what units we have(as long as they are same units) , the answer is still the same. Therefore, when working with division of fractions, we can utilize common denominators to get our same units and be able to divide just the numerators. (SMP 7).

Sixth grade Lesson Dividing Fractions | BetterLesson  
Therefore, when working with division of fractions, we can utilize common denominators to get our same units and be able to divide just the numerators. (SMP 7). Students can use

a think-pair-share to discuss their thoughts on each statement.

Sixth grade Lesson Dividing Fractions | BetterLesson  
Dividing whole numbers by fractions. Interpret and compute quotients of fractions, and solve word problems involving division of fractions by fractions, e.g., by using visual fraction models and equations to represent the problem. For example, create a story context for  $(2/3) \div (3/4)$  and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that  $(2/3) \div (3/4) = 8/9$  because  $3/4$  of  $8/9$  is  $2/3$ .
