Biological

Lipid Biological

Functions - News-
Medical.net

Lipids perform three primary biological functions within the body: they serve as structural components of cell membranes, function as energy storehouses, and

Download Free Lipids

function as important signaling molecules. The three main types of lipids are triacylglycerols (also called triglycerides), phospholipids, and sterols.

Non-polar molecules are hydrophobic (“water fearing”), or insoluble in water.

Lipids perform many different functions in a cell. Cells store energy for long-term use in the form of fats. Lipids also provide insulation from the environment for plants and animals (Figure 1).
