Patients with sickle cell disease can develop liver disease as a result of intrahepatic sickling of erythrocytes, viral hepatitis and iron overload secondary to multiple blood transfusions, and gallstone disease as a result of chronic hemolysis. The spectrum of clinical liver disease is wide and often multifactorial.

## *The Liver in Sickle Cell Disease*

Liver disease is an important cause of morbidity and mortality in patients with sickle cell disease (SCD). Despite this, the natural history of liver

# Online Library Liver Disease In Sickle Cell

disease is not well characterized and the evidence basis for specific therapeutic intervention is not robust. The spectrum of clinical liver disease encountered includes asymptomatic abnormalities of liver function; acute deteriorations in liver function, sometimes with a dramatic clinical phenotype; and decompensated chronic liver disease.

*Management of liver complications in sickle cell disease ...*

The liver is one of the organs involved in the multiorgan failure that occurs in sickle cell

lead to liver fibrosis/cirrhosis,  
secondary to chronic blood  
transfusions.

*Liver Fibrosis in Sickle  
Cell Disease - Drug Genius*  
Up to 30% of patients with  
sickle cell disease (SCD)  
develop chronic liver  
disease via etiologies  
including sickle cell  
hepatopathy, acquired viral  
hepatitis, or secondary  
hemochromatosis. It is  
unclear how many patients  
with SCD ultimately undergo  
liver transplantation (LT)  
and what factors are  
associated with survival  
after LT.

Examples and Images ...*

Homozygous sickle cell anemia, or sickle cell disease (SCD), affects an estimated 1 in 600 African American children. 1 Hepatomegaly and liver biochemical abnormalities are nearly universal in affected persons; most patients have increased serum unconjugated bilirubin and aspartate aminotransferase (AST) levels as a result of ongoing hemolysis.

sickle cell hepatopathy ...*  
The overall incidence of

## Online Library Liver Disease In Sickle Cell

Liver disease in patients with sickle cell disease (SCD) has not been well established. The major risk factor for liver disease in patients with SCD is receiving multiple blood transfusions, which is associated with infection (hepatitis B and C) and excessive iron stores.

### *UpToDate*

Sickle cell anemia is one of a group of disorders known as sickle cell disease. Sickle cell anemia is an inherited red blood cell disorder in which there aren't enough healthy red blood cells to carry oxygen throughout your body.

# Online Library Liver Disease In Sickle Cell

Normally, the flexible, round red blood cells move easily through blood vessels.

*Sickle cell anemia -  
Symptoms and causes - Mayo  
Clinic*

Sickle cell disease and its treatment through blood transfusion can lead to significant liver damage. This disease also can cause the liver to regrow abnormally after damage. This can cause high blood pressure in the liver. Researchers want to know if curing sickle cell disease with a stem cell transplant improves liver damage.
