A Study Guide for Alexander Pushkin's "The Bronze Horsemen," excerpted from Gale's acclaimed Poetry for Students. This concise study guide includes plot summary; character analysis; author biography; study questions; historical context; suggestions for further reading; and much more. For any literature project, trust Poetry for Students for all of your research needs.

Unto the GREAT LIVING Fountainhead, THE SOLE GURU of the KRIYA YOGA tradition BABAJI! We ask for your Guidance and an extra portion of your Spirit till Love for the Deity Is foremost prevalent in our Souls. Let my Gaze be steady and my Breath be still, so that my small self be united with the Vastness of The All-Encompassing. Bring down into this murky world the clear light of consciousness, unconditional Joy and Peace. May every one receive this greatest human potential.

A guide that uses programmable logic as the vehicle for instructing readers in the principles of digital design. Following discussion of digital fundamentals, the book introduces readers to Complex Programmable Logic Devices. Graphic design files, VHDL files and simulation files are on the CD-ROM, so readers can run simulations or program CPLDs with error-free design files and use these files as templates for their own modifications.

Highlights of the book: Discussion about all the fields of Computer Aided Engineering, Finite Element Analysis Sharing of worldwide experience by more than 10 working professionals Emphasis on Practical usage and minimum mathematics Simple language, more than 1000 colour images International quality printing on specially imported paper Why this book has been written ... FEA is gaining popularity day by day & is a sought after dream career for mechanical engineers. Enthusiastic engineers and managers who want to refresh or update the knowledge on FEA are encountered with volume of published books. Often professionals realize that they are not in touch with theoretical concepts as being pre-requisite and find it too mathematical and Hi-Fi. Many a times these books just end up being decoration in their book shelves ... All the authors of this book are from IIT & IISc and after joining the industry realized gap between university education and the practical FEA. Over the years they learned it via interaction with experts from international community, sharing experience with each other and hard route of trial & error method. The basic aim of this book is to share the knowledge & practices used in the industry with experienced and in

particular beginners so as to reduce the learning curve & avoid reinvention of the cycle. Emphasis is on simple language, practical usage, minimum mathematics & no pre-requisites. All basic concepts of engineering are included as & where it is required. It is hoped that this book would be helpful to beginners, experienced users, managers, group leaders and as additional reading material for university courses.

China's party-run courts have one of the highest conviction rates in the world, with forced confessions remaining a central feature. Despite recent prohibitions on evidence obtained through coercion or torture, forced confessions continue to undermine the Chinese judicial system. Recounting some harrowing cases of wrongful conviction, acclaimed legal scholar and novelist He Jiahong analyzes many problems in China's justice system. In one such case, Teng Xingshan was convicted in 1988 and later executed for murdering his mistress, but almost six years later it was discovered that the supposed victim, Shi Xiaorong, was still alive. In 2005, Teng's children submitted a complaint to the Hunan High People's Court, which then issued a revised judgment. In another case, She Xianglin was convicted of murdering his wife in 1994 and was sentenced to death, but this sentence was later commuted to fifteen years' imprisonment. In 2005, She's wife, presumed dead for over eleven years, "returned to life"; She was released from prison two weeks later, retried and found not guilty. With riveting examples, the author surveys the organization and procedure of criminal investigation, the lawyering system for criminal defense, the public prosecution system, trial proceedings, as well as criminal punishments and appeals. In doing so, He highlights the frequent causes of wrongful convictions: investigators working from forced confessions to evidence; improperly tight deadlines for solving criminal cases; prejudicial collection of evidence; misinterpretation of scientific evidence; continued use of torture to extract confessions; bowing to public opinion; nominal checks among the police, prosecutors and the courts; the dysfunction of courtroom trials; unlawfully extended custody with tunnel vision; and reduced sentencing in cases of doubt. The author also provides updated information about recent changes and reforms as well as the many continuing challenges of the criminal justice system in China.

Despite being blessed with the power of intelligence, logic, imagination and analysis, why do we humans struggle to use the gift of common sense in so many areas of our lives? Have you ever found yourself wondering... Why do we get angry or irritated? Why do we feel guilty? Why do we tell lies or get defensive? Why is there so much lack of trust? Why do we struggle to accept ourselves as we are? Why do we often complicate our own lives? Why do we love to criticize or shy away from candid conversation? The simple truth is that we could handle situations better and solve dilemmas just by applying common sense. This book takes a clear-eyed look at day-to-day scenarios we are all familiar with, in which, by simply altering our perspective and using some common sense, we can resolve or reduce our issues. It serves as a down-to-earth guide to letting go of negative emotions such as anger, frustration, guilt, grief, irritation, unhappiness and joylessness. These pages are dedicated to helping people live their lives with greater ease, freedom, and simplicity — by consciously using the most important tool existence has bestowed upon us — common sense.
