Making Math Accessible for English Language Learners provides practical classroom tips and suggestions to strengthen the quality of classroom instruction for teachers of mathematics. The tips and suggestions are based on research in practices and strategies that address the affective, linguistic, and cognitive needs of English language learners.

A perfect resource for high school mathematics teachers, this book helps them develop or refine their own teaching philosophy. They'll learn how to create a supportive classroom environment in which their students think together, take intellectual risks, and debate ideas. They'll gain a better understanding about the importance of cooperative learning strategies through immersion. And they'll engage in logic and reasoning. Puzzles and activities are presented to bring the material to life as well. All of this will help high school mathematics bring the excitement of the subject into the classroom.

Centered around Common Core State Standards, Common Core Math Activities features hands-on lab activities that allow students to explore and gain deeper understanding of mathematical concepts. From Wrapping Packages to Crime Scene Investigation, students will be challenged to pull from previous mathematical knowledge and extend it as they investigate mathematical relationships and concepts. This 96-page resource features teacher pages which include materials, pacing, and helpful tips for each lab. Each activity is designed to help develops problem-solving skills. Mark Twain Media Publishing Company specializes in providing captivating, supplemental books and decorative resources to complement middle- and upper-grade classrooms. Designed by leading educators, the product line covers a range of subjects including mathematics, sciences, language arts, social studies, history, government, fine arts, and character.

Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the eighth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

This third edition of T eaching Mathematics for the 21st Century continues to help teachers let the secret out–to open up to their students the wonderful discoveries and challenges of the pattern-making and problem-solving aspects of a fascinating subject: mathematics. The rationale remains the same–to enable prospective and current teachers to access and use tools and strategies to effectively teach mathematics to contemporary students. Changing demographics, knowledge of how people learn, and technology all impact the way we educate our young people. This edition incorporates lessons and strategies from programs that have proven success in many types of classrooms. Many of these examples help students connect mathematics to real life situations and communicate their understanding of the underlying concepts. Although technology is constantly being upgraded, ways to increase student motivation through its application remains a goal. For example--since applets can enhance a lesson whether the teacher uses a computer projector, a “smart” board, or has students work individually on computers--we have identified several sources of mathematics applets that can be correlated to various lessons. Research citations and summaries have been updated to reflect current information on teaching and learning. For future teachers.

Making Math Accessible for English Language Learners provides practical classroom tips and suggestions to strengthen the quality of classroom instruction for teachers of mathematics. The tips and suggestions are based on research in practices and strategies that address the affective, linguistic, and cognitive needs of English language learners. Although this resource centers on teaching English language learners, many of the tips and suggestions benefit all students. Making Math Accessible for English Language Learners follows five case studies of composite student profiles throughout the book with opportunities for reflection to increase personal awareness of both the teacher’s role and students’ needs in the mathematics classroom, tasks to provide interaction with the content of the book, and hot tips for ideas applicable to real-world classroom situations.

Realizing that middle-grades students bring to classrooms different experiences that shape their meaning about mathematics, both from inside and outside the classroom, it seems that embracing culture…is one important way to address a need in schools - that is, high achievement in mathematics by all students. - Michaele Chappell and Denisse Thompson If your students can text like this: cul8r bff, they can solve for this: 3x+5=39+2x In the middle grades personal identity becomes more important to learning than ever. More than a decade of research tells us that effective school mathematics has to be relevant to the lives and cultures of every student. Chappell and Thompson bring you a unique and user-friendly teacher resource that incorporates popular media from a variety of cultures in rich and engaging math investigations. A wide range of math concepts - from algebraic thinking to number and operation, geometry to probability - are embedded within dynamic activities. Engage your media-savvy students with investigations from popular films, games, literature, and the internet. Connect your students to stories from African American, Latino, Asian, and Native American cultures. Activities are ready to use or customizable for your classroom. CD-ROM includes: 90+ reproducible investigations with answer keys available as customizable Word documents Quick-reference matrix that cross references the activities by the five content strands of the Principles and Standards for School Mathematics from the National Council of Teachers of Mathematics and by the four cultural groups. You can bring middle school math to life for all your students. This resource, ready to supplement your existing curriculum, shows you how and why to do it!
