Light bulb brightness | Philips lighting

Color temperature defines the color appearance of a white LED. CCT is defined in degrees Kelvin; a warm light is around 2700K, moving to neutral white at around 4000K, and to cool white, at 5000K or more. Note that CCT does not tell you anything about the color rendering ability of the LED.

What does correlated colour temperature, CCT ... - Philips

Colour temperature is indicated in a unit called Kelvin (K). A low colour temperature creates a warm, cosy light effect, while a high colour temperature creates a cool, more energising effect. The majority of Philips LED lighting products provides 2700 Kelvin, which is warm white light. Try the colour slider below to learn more about colour temperature, or have a look at our Wiki guide on colour temperature.

Warm white LED and daylight LED | Philips lighting

How to Measure Colour Temperature. Correlated colour temperature is measured in degrees Kelvin on a scale from 1,000 to 10,000. Unlike measuring temperature in degrees celsius, the warmer a bulb 's light is, the lower its temperature will be. A cooler temperature will have a higher value. For reference, candlelight has a colour temperature of about 2,000K, while sunlight has a temperature of about 6,000K.

Colour Coding Nomenclature. With the launch of the first fluorescent tubes, the choice of colours was restricted to a single shade of 'White' plus seven vibrant colours. The white was a neutral colour having a CCT of around 4000K. Soon this was joined by a lower colour temperature known as 'Mellow' or 'Warm White'.

The Fluorescent Lamp - Choice of Colours

The colour change is managed via a switch on the front of the unit behind the magnetic bezel, allowing the colour temperature to be changed between 3000K, 4000K & 6000K. Not only does this make it easier to change colour temperatures once the unit has been installed, it is also an effective space saver when stocking a large number of the downlights, as opposed to having downlights in each colour temperature.

Guide to colour temperature - Northgate Lighting

Starting at full brightness at a regular 2800K or 2700K warm white colour temperature, as they get dimmed they start appearing more warmer. The lower the brightness becomes the warmer they become, until they reach a colour temperature of 1800K to 2200K which is similar to a candlelight effect.
