Book : Principles of microbe and cell cultivation. 1975 pp.274 pp. Abstract : This book is intended for students and as a reference text for research workers concerned with culture of micro-organisms in various fields, including agriculture. Its main aim is to discuss the control of microbial cultures and to formulate as far as possible a framework of general results and principles.

Principles of microbe and cell cultivation.

Classification seeks to describe the diversity of bacterial species by naming and grouping organisms based on similarities. Microorganisms can be classified on the basis of cell structure, cellular metabolism, or on differences in cell components such as DNA, fatty acids, pigments, antigens, and quinones.
