The purpose of Marketing Research for Managers is to enable managers to become more informed research users and buyers. The more managers know about how marketing research works, the more effective they can be in using it as a management tool. This new edition of the text includes: * The development of the "knowledge economy" * Analysis of customer relationship management * Comprehensive discussion of electronic techniques * New and updated case studies and examples

This is a practical and accessible, yet sophisticated introduction to interpretive methods for doing qualitative research projects and dissertations. Bringing together concepts of qualitative research from ethnography, phenomenology, critical discourse analysis, semiotics, literary analysis, postmodernism and poststructuralism this textbook offers an accessible and comprehensive introduction to the subject. Utilising a uniquely pragmatic approach, it bridges the gap between advanced, specialised books on research traditions with more general introductory business research books. This new edition has been fully updated to include new examples, explorations of the field, and an improved pedagogy with better exposition of key issues and concepts, as well as more schematics and diagrams to aid understanding. The first half of the book considers the practicalities of research and writing a research project, including the craft of academic writing, the critical literature review, the role of the independent research project as part of university courses, suggested projected structures, standards of academic scholarship, and the main techniques for gathering qualitative data. The book 's second half deals with abstract concepts and advanced theory by looking at key theoretical traditions that guide the interpretation of qualitative data. It is perfect for advanced undergraduate and postgraduate students of marketing, management, consumer behaviour and research methods. It will also be useful as a primer for practitioners in qualitative research.

This book provides a synthesis of research perspectives on customer engagement through a collection of chapters from thought leaders. It identifies cutting-edge metrics for capturing and measuring customer engagement and

highlights best practices in implementing customer engagement marketing strategies. Responding to the rapidly changing business landscape where consumers are more connected, accessible, and informed than ever before, many firms are investing in customer engagement marketing. The book will appeal to academics, practitioners, consultants, and managers looking to improve customer engagement.

This collection of articles deal with marketing history and the history of marketing thought, placing these subjects within a marketing management context. Despite the crucial role that historical research can play in expanding our understanding of marketing, studies of the history of marketing are thin on the ground. This volume aims to address this gap. Topics include the history of the Boston Consulting Group's growth-share matrix, branding, the emergence of marketing schools of thought, managerialism, the marketing concept, relationship marketing, scientific management and marketing, and critical marketing studies. The introduction discusses the three themes that run through the collection: historical method, marketing history, and the history of marketing thought. This book was originally published as a special issue of the Journal of Marketing Management.

For upper-level undergraduate or MBA "core" courses in Marketing Management. This book is perfect for getting to the core concepts for any Marketing Management course, but particularly fitting for instructors who like to introduce cases and other source material. Unique and central to this book is the Marketing Strategy Framework, which is introduced in chapter two and continues throughout the rest of the book.

Quantitative marketing has been gaining importance during the last decade. This is indicated by the growing number of model- and method-oriented studies published in leading journals as well as by the many successful applications of quantitative approaches in pricing, advertising, new product planning, and market segmentation decisions. In addition, market research has clearly benefitted from applying advanced quantitative models and methods in practice. Some 60 researchers – among them worldwide leading scholars – offer a broad overview of quantitative approaches in marketing. They not only highlight diverse mathematical and methodological perspectives, but also demonstrate the relevance and practical consequences of applying quantitative approaches to marketing problems.

The Second Edition of this bestselling B2B marketing textbook offers the same accessible clarity of insight, combined with updated and engaging examples. Each chapter contains a detailed case study to further engage the reader with the topics examined. - Featuring updated case studies and a range of new examples. - Incorporating additional coverage of B2B branding and the B2B strategic marketing process, and issues of sustainability. - Extended coverage of Key Account Management - Online lecturer support including PowerPoint slides and key web links Drawing on their substantial experience of business-to-business marketing as practitioners, researchers and educators, the authors make this exciting and challenging area accessible to advanced undergraduate and to postgraduate students of marketing, management and business studies. Praise for the Second Edition: 'I found that the first edition of Brennan, Canning and McDowell's text was excellent for raising students' awareness and understanding of the most important concepts and phenomena associated with B2B marketing. The second edition should prove even more successful by using several new case studies and short 'snapshots' to illustrate possible solutions to common B2B marketing dilemmas, such as the design and delivery of business products and services, the selection of promotional tools and alternative routes to market. The new edition also deals clearly with complex issues such as inter-firm relationships and networks, e-B2B, logistics, supply chain management and B2B branding' - Michael Saren, Professor of Marketing, University of Leicester 'This textbook makes a unique contribution to business-to-business teaching: not only does it provide up-to-date cases and issues for discussion that reach to the heart of business-to-business marketing; it also brings in the latest academic debates and makes them both relevant and accessible to the readers. A fantastic addition to any library or course' - Dr Judy Zolkiewski, Senior Lecturer in Business-to-Business Marketing, Manchester Business School 'The advantage of the approach taken by Brennan and his colleagues is that this book manages to convey both the typical North American view of B2B marketing as the optimisation of a set of marketing mix variables, and the more emergent European view of B2B Marketing as being focused on the management of relationships between companies. This updated second edition sees the addition of a number of 'snapshots' in each chapter that bring the subject alive through the description of current examples, as well as some more expansive end-of-chapter case studies. It is truly a most welcome addition to the bookshelves of those students and faculty interested in this facet of marketing' - Peter Naudé, Professor of Marketing, Manchester Business School 'The strength of this text lies in the interconnection of academic theory with real world examples. Special attention has been given to the role that relationships play within the Business-to business environment, linking these to key concepts such as segmentation, targeting and marketing communications, which importantly encompasses the role personal selling as relationshipcommunications building and not just order taking. With good coverage of international cultural differences this is a valuable resource for both students of marketing and sales' - Andrew Whalley, Lecturer in Business-to-Business Marketing, Royal Holloway University of London 'The text provides an authoritative, up-to-date review of organisational strategy development and 'firmographic' market segmentation. It provides a comprehensive literature review and empiric examples through a range of relevant case studies. The approach to strategy formulation, ethics and corporate social responsibility are especially strong' - Stuart Challinor, Lecturer in Marketing, Newcastle University 'This revised second edition offers an excellent contemporary view of Business-to-Business Marketing. Refreshingly, the text is packed with an eclectic mix of largely European case studies that make for extremely interesting reading. It is a 'must read' for any undergraduate or postgraduate Marketing student' - Dr Jonathan Wilson, Senior Lecturer, Ashcroft International Business School, Anglia Ruskin University, Cambridge

As interpretive research perspectives become increasingly influential in the social sciences, so it becomes increasingly important for experienced researchers to familiarize themselves with the philosophical perspectives, data gathering techniques and analytical methods derived from interpretive research. Examining these interpretive traditions, this informative book illustrates how they can be applied to research projects for first-time researchers in the fields of management, marketing and consumer research. Topics covered include: choosing the topic gathering qualitative data for interpretation themes and concepts of interpretive research semiotics, marketing and consumer research. In offering practical examples drawn from existing studies and suggesting new topics for consideration, this book brings together major themes of interpretive research within a valuable practical guide. Suitable both for first time researchers and those with more experience, this is an ideal guide for anyone undertaking research in this area of study.
