And Concepts Answers*

So-called routing protocols are the family of network protocols that enable computer routers to communicate with each other and in turn to intelligently forward traffic between their respective networks. The protocols described below each enable this critical function of routers and computer networking. How Routing Protocols Work

Metrics represent a composite value of the amount of packet loss occurring for all routing protocols. Metrics are used by the router to determine if a packet has an error and should be dropped. Metrics are only used by dynamic routing protocols. A metric is the quantitative value a routing protocol uses to measure a given route.

Routing Protocols Companion Guide

1. Which of the following routing protocols support VLSM? (Choose three answers.) A OSPF B EIGRP C RIPv2
Explanation: Answers A, B, and C are correct. Classless routing protocols, by definition, support VLSM because classless routing protocols transmit the subnet mask in their routing updates. Of the listed answers, only RIP version 1 (RIPv1) is not a classless routing protocol.

Quiz questions for ch20.docx - 1 Which of the following ...

A router contains four types of memory:
RAM – volatile memory used to store the running IOS, running configuration file, routing table, ARP table, as well as serve as a packet buffer
ROM – nonvolatile memory used to hold a limited version of the IOS, bootup instructions, and basic

A routing protocol, on the other hand, is only used between routers. Its purpose is to help routers building and maintain routing tables. The only two routed protocols you should worry about are IP and IPX (although Cisco has dropped IPX from the latest CCNA exam, it is helpful to understand the concepts behind it).
