Well, one simple solution to solving this problem is TDD or Test-Driven Development. TDD is the process of testing your app prior to implementing it, so you know exactly how your older code will react with your newer code. If you want to create professional and error-free codes, then TDD is a great process to learn.

Laravel Test Driven Development - DEV

In Extreme Programming, programmers practice Test Driven Development (TDD). They begin developing code by writing a failing executable unit test that demonstrates the existing code base does not currently possess some capability. Once they have a failing unit test, they then write the production code to make the test pass.
