OpenBSD's stateful packet filter, PF, is the heart of the OpenBSD firewall. With more and more services placing high demands on bandwidth and an increasingly hostile Internet environment, no sysadmin can afford to be without PF expertise. The third edition of The Book of PF covers the most up-to-date developments in PF, including new content on IPv6, dual stack configurations, the "queues and priorities" traffic-shaping system, NAT and redirection, wireless networking, spam fighting, failover provisioning, logging, and more. You'll also learn how to:

- * Create rule sets for all kinds of network traffic, whether crossing a simple LAN, hiding behind NAT, traversing DMZs, or spanning bridges or wider networks
- * Set up wireless networks with access points, and lock them down using authpf and special access restrictions
- * Maximize flexibility and service

availability via CARP, relayd, and redirection * Build adaptive firewalls to proactively defend against attackers and spammers * Harness OpenBSD's latest traffic-shaping system to keep your network responsive, and convert your existing ALTQ configurations to the new system * Stay in control of your traffic with monitoring and visualization tools (including NetFlow) The Book of PF is the essential guide to building a secure network with PF. With a little effort and this book, you'll be well prepared to unlock PF's full potential.

Provides information on building networks with PF, covering such topics as creating a wireless access point, using tables and proactive defense against spammers, and setting up queries and traffic shaping with ALTQ.

This second edition is an up-to-date, no-nonsense guide to harnessing the power of PF. The author covers NAT (network address translation) and redirection, wireless networking, SPAM fighting, failover provisioning, logging, and more.

Hannah Beckerman pens a life-affirming novel that tells the story of a family divided and the secret that can possibly unite them—a must for fans of *This Is Us*. “I loved it (even though it made me cry).”—Jojo Moyes *A secret between two sisters*. A lifetime of lies unraveling. Can one broken family find their way back to each other? Audrey’s dream as a mother had been for her daughters, Jess and Lily, to be as close as only sisters can be. But now, as adults, they no longer speak to each other, and Audrey’s two teenage

granddaughters have never met. Audrey just can't help feeling like she's been dealt more than her fair share as she's watched her family come undone over the years, and she has no idea how to fix her family as she wonders if they will ever be whole again. If only Audrey had known three decades ago that a secret could have the power to split her family in two, and yet, also keep them linked. And when hostilities threaten to spiral out of control, a devastating choice that was made so many years ago is about to be revealed, testing this family once and for all. Once the truth is revealed, will it be enough to put her family back together again or break them apart forever? "Utterly compelling and completely heartbreaking. I couldn't put it down." — Ruth Hogan "Totally engrossing, achingly sad and so perceptive about the corrosive legacy of family secrets."—Kate Eberlen, author of

packet filter. But nobody ever talks about the load balancer, or the web server. Until now. The httpd web server provides a fast, stable, secure environment for your web applications. The relayd load balancer lets you distribute Internet application load across multiple hosts. Between the two, you can slash hundreds of thousands of dollars off the cost of building, deploying, and managing applications. With Httpd and Relayd Mastery you'll learn how to:

- set up web sites
- configure software to run in a chroot
- run dozens or hundreds of sites on one host
- dynamically reconfigure sites with Lua patterns
- manage site logs
- maintain free, globally-valid SSL certificates
- improve performance with SSL stapling
- install and maintain two-server clusters
- distribute traffic between any number of hosts
- stop worrying about old SSL versions and bad crypto algorithms

Written by Jacek Artymiak, a frequent contributor to ONLamp.com, Building Firewalls with OpenBSD and PF is the first and only print publication devoted solely to the subject of the pf packet filter used in OpenBSD, FreeBSD, and NetBSD operating systems. Topics covered include: firewall design, ruleset syntax, packet normalization (scrubbing), packet redirection (masquerading), packet filtering, bandwidth management (ALTQ), load balancing, and more. The author maintains a web site and a mailing list for the readers of his book.
