In 1988, the IEEE established a committee to develop the 802.11 standard.[11.7] All of the 802 standards deal with the data link layer and physical layer of the OSI reference model. Part 11, or 802.11, defines all of the specifications for wireless local area networks. The IEEE 802.11 committee held two wireless LAN workshops before actually releasing the first version of the standard in 1997. The purpose of these workshops was to facilitate

First of all, the 802.11 is a set of standards used by IEEE. The most commonly deployed are 802.11a, 802.11b, 802.11g, 802.11n and 802.11ac. These standards can be found in homes and businesses today. Most businesses are using 802.11n and are looking to adopt 802.11ac as it is the fastest and latest available. 802.11a was the most popular standard in 1999 and was the first form of 802.11 technology. It was very fast by 1999 standards and was improved upon by 802.11b and 802.11g.

The standard defined physical and MAC layers of wireless local area networks (WLANs). The physical layer of the original 802.11 standardized three wireless data exchange techniques: Infrared (IR);

The timeline describes the evolution of the 802.11ac standard, commonly known as Wi-Fi, starting with the creation of the Ethernet in 1973. Wireless technology began developing in the early 1970s and has since become an everyday necessity for both consumer and enterprise. The 802.11 standard, which governs the technology's development, has gone through several facelifts in the 17 years since the specification was first created.

Like previous evolutions within WLAN, 802.11ac and IEEE802.11ad are designed to be fully backward-compatible with previous standards. IEEE introduced multiple-input, multiple-output (MIMO) to 802.11n, and IEEE 802.11ac will expand this capability to support up eight spatial streams and multi-user MIMO (MU-MIMO).

Introduced in 1999, IEEE 802.11a standard uses the 5 GHz spectrum and provides a maximum theoretical data rate of 54 Mbps. The data rate automatically lowers down to (54/48/36/24/12/9/6 Mbps) to maintain the connectivity with the increased distance or attenuation.
