Object-Oriented Programming (OOP) is the most dramatic and potentially confusing innovation in software development since the dawn of the computer age. Based on the idea of treating functions and data as objects, OOP results in programs that are more flexible, more easily maintained, and, on the whole, more powerful. Suitable for students, hackers, and enthusiasts, Object-Oriented Programming in Turbo C++ is written by best-selling author Robert Lafore. Step-by-step lessons teach the Basics of Object-Oriented Programming with Turbo C++ and its new Windows-compatible sibling, Borland C++. Object-Oriented Programming in Turbo C++ focuses on C++ as a separate language, distinct from C, and assumes no prior experience with C.

Advanced Turbo C Programming provides the necessary programming tools for programmers who are interested in learning new skills in developing some useful tools and PC applications using the Turbo C Version 1.5 programming language and environment. This book covers both the advanced programming features of the IBM PC and Turbo C. It is organized into five sections. In Section 1 the proposed ANSI standard features, tips and techniques about C programming style, working with the C preprocessor, and tips for using pointers and managing memory allocation tasks are introduced. Section 2 discusses techniques for constructing useful and reliable data structures from linked lists to binary trees. The third section provides the complete Turbo C I/O system and takes an in-depth look at the many tools that Turbo C provides for accessing files and other I/O devices. Section 4 explains the techniques for interacting with DOS and the special features of Turbo C such as the Borland Graphic Interface (BGI). The final section, Section 5 presents the tools and techniques for developing Turbo C-like user interfaces, such as pop-up windows, pop-up menus, and pulldown menus. Computer programmers will find the text invaluable.

This introduction to both structured programming and object-oriented programming using the C++ language and the Turbo C++ compiler starts from the beginning, assuming no previous knowledge of any programming language.
