The effects of the warm up and cool down process - Methods ...

Warming up and cooling down are hugely important and provide so many benefits.

## OCR GCSE PE Revision - Warming Up & Cooling Down

Warm up for 5 to 10 minutes. The more intense the activity, the longer the warm-up. Do whatever activity you plan on doing (running, walking, cycling, etc.) at a slower pace (jog, walk slowly). Use your entire body. For many people, walking on a treadmill and doing some modified bent-knee push-ups will suffice. Cool down

Warm Up, Cool Down | American Heart Association

## Access Free Warming Up And Cooling Down 2nd

As with warming-up, higher intensity efforts require longer cool downs to return the body to its pre-exercise state. As a rule, enough time should be taken to progressively bring the heart rate down to near resting levels while still turning your legs over.

Warm ups and cool downs for cyclists  
A warm up can take from ten minutes up to an hour. Warm up starts with pulse raising activities such as easy jogging or cycling, or anything that gently raises the heart rate. Next come mobility...

The effects of the warm up and cool down process - Methods ...

Why Warming Up and Cooling Down Is So Important. A warm-up and a cool-down both involve doing exercises at a lower intensity and slower pace, which improves your athletic performance,

## Access Free Warming Up And Cooling Down 2nd

prevents injuries, and helps with recovery from exercise. Warm up activities include light jogging, or cycling slowly on a bike. Warming up before exercise prepares your cardiovascular system for physical activity, by increasing the blood flow to your muscles, and raising the temperature of your body.
