Extjs | calendar.pridesource~~

MVC (Model-View-Controller) is an architectural software pattern that essentially decouples various components of a web application into model, view, and controller. ASP.NET is a unified Web development model that includes the services necessary for you to build enterprise-class Web applications with a minimum of coding [13].

the controller to create the business logic of the web application.

## ~~6 Advantages of using MVC model for effective web ...~~

The MVC application architecture is most suitable for development of web applications that benefit from being fully rendered on the server, i.e. those that need to be easily indexable by search engines and don't require a lot of quick user interaction. Examples of such applications are publicly accessible web portals and dynamic web sites.

## ~~Developing Web Applications in .NET (Different Approaches ...~~

MVC is a design pattern used to decouple user-interface (view), data (model), and application logic (controller). This pattern helps to achieve separation of concerns. Using the MVC pattern for websites,

MVC web frameworks now hold large market-shares relative to non-MVC web toolkits. [citation needed] Use in web applications . Although originally developed for desktop computing, MVC

# Read Book Web Development Using C Mvc

has been widely adopted as a design for World Wide Web applications in major programming languages. Several web frameworks have been created that enforce the pattern.

## ~~Model-view-controller - Wikipedia~~

To create a new ASP .NET MVC Application, you will need to create a new project, and go to the Web tab. If you are using Visual Studio Express for Web, you will immediately see this project option when creating a new project. In this case, choose the MVC option, then click the Change Authentication button and choose No Authentication. In earlier editions of Visual Studio, this screen may look a bit different.
