File Type PDF Windows Forms Using C

Windows Forms vs. MFC Since its earliest days, Visual C++ has shipped with a library called MFC (Microsoft Foundation Classes). This library is used for writing C++ applications for Microsoft Windows, and it encapsulates mostly the part of the Windows API that deals with GUI programming, along with some other areas

File Type PDF Windows Forms Using C

such as databases and networking.

~~Introducing Windows Forms 1 - Visual
C++~~

The Windows API (also known as the Win32 API, Windows Desktop API, and Windows Classic API) is a C-language-based framework for creating Windows

File Type PDF Windows Forms Using C

applications. It has been in existence since the 1980s and has been used to create Windows applications for decades. More advanced and easier-to-program frameworks have been built on top of the Windows API.

Corner

Every control on a form is an instance of a `System.Windows.Forms` class and is created in the `InitializeComponent ()` method. You can add or edit code here.

For instance, in the `// menuItem2` section, add this on the end and compile/run.

```
this.menuItem2.Visible = false;
```
